SOFT SOLUTIONS, INC. PURCHASES 4-SIGHT FAX PRODUCT

*Software Developer To Incorporate Leading Macintosh Fax Server Software
Into Its Portfolio With Ongoing Development And Investment*

ATLANTA – November 2, 2000 – Soft Solutions, Inc., a leading software developer of information management systems, today announced the purchase of the 4-Sight Fax™ product from WAM!NET, Inc. 4-Sight Fax is a leading Macintosh client/server software application that allows users to convert a Macintosh computer into a fax server. WAM!NET, through its product division, 4-Sight, will retain the rights to be an authorized sales distributor, selling current and future versions of the 4-Sight Fax product to its customer base worldwide.

Soft Solutions has acquired the licensing and trademark rights to the leading Macintosh client/server software application. The software/server combination allows users on an attached network to send and receive faxes from their desktops, managing all the queuing, imaging, sending, and receipt notification of these faxes. 4-Sight Fax is also noted for its easy to implement broadcast capabilities.

Soft Solutions has a history of building plug-ins that enhance the operation of 4-Sight Fax, and has also built separate applications that utilize its features. The acquisition of 4-Sight Fax ensures for Soft Solutions that the foundation of its faxing tools remains intact while providing the freedom to develop an enhanced feature set for the product. Soft Solutions will shortly release a fully Mac OS 9 compliant version of 4-Sight Fax, version 4.1. It will be available as a free upgrade to owners of the current version, 4.0.6. The company intends to devote ongoing product development towards an OS X and, ultimately, Web-based solution with I/P access and SMTP email sending capabilities. Soft Solutions also is working on development of a Windows client. These tools will allow customers to access their 4-Sight fax services from anywhere in the world.

"4-Sight Fax is a product known for its history of innovation and stability. Soft Solutions intends to advance the product with enhanced practical web-based tools and other new features" said Tim Haratine, president of Soft Solutions, Inc. "As low-tech as faxing may seem, we find that customers worldwide are actively seeking a fax product that has strong links to Web networking. This is particularly the case in Europe. As evidence of this continued interest, we are pleased that WAM!NET's product division, 4-Sight, will serve as a distribution partner for the product as they market and sell current and future versions of the 4-Sight Fax product to their customers. Both WAM!NET and Soft Solutions are committed to a smooth transition of the product with specific focus on uninterrupted customer service and support."

"Consistent with WAM!NET's efforts to sharpen both market and strategic focus on delivering our portfolio of network, storage, application and hosting services, we are pleased that Soft Solutions will continue to develop and enhance the 4-Sight Fax product," said Harvey Jones, vice president of product division at 4-Sight, a division of WAM!NET, Inc. "Soft Solutions has been a strong development partner with 4-Sight on 4-Sight Fax for more than five years. We believe more innovative developments will continue under Soft Solutions, and we intend to market and sell 4-Sight Fax to our customers on an ongoing basis."

Terms of the agreement were not disclosed. Soft Solutions stated plans to accelerate product development for an OS X compatible release during 2001.

About Soft Solutions, Inc.

About WAM!NET Inc.

4-Sight is the product sales division of WAM!NET, Inc. The division develops and sells transmission and workflow management software used at more than 35,000 sites in 42 countries. WAM!NET acquired 4-Sight in March, 1998.

Headquartered in Eagan, Minnesota, WAM!NET is a leading provider of business-to-business network, data storage, application and hosting services to companies that produce and distribute digital content. Delivered to customers on an outsourced, subscription or pay-per-use basis, the company's services unite collaborative communities that specify, create, print, store, broadcast and distribute content within WAM!NET's online, secure digital environment. WAM!NET serves many of the world's leading corporations, pre-press shops, printers, advertising agencies and publishers, and is increasingly in demand in the feature film production, broadcast, medical and government markets.

Commencing operations in 1995, WAM!NET has approximately 13,700 corporate end users of its e-services worldwide. WAM!NET services are available throughout North America, Europe and Japan. The company has strategic relationships with SGI, MCI WorldCom and Winstar Communications. For information on WAM!NET, call 800-611-9006, or visit the company's Web site at www.wamnet.com.
